

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (currently amended) A concentrated nitrogen and phosphorus fertilizer composition comprising, in combination:

an ammonium phosphite composition having a pH in solution with water in the range of about 5 to 8, a weight percent of nitrogen in the range of about 6 to 12, and a weight percent of phosphorus in the range of about 32 to 36 weight percent, said phosphorus comprising a phosphite ion in solution, the ammonium phosphite composition having a nitrogen:phosphorous molar ratio of between about 1:1 to about 2:1.

2. (original) The fertilizer of claim 1 in combination with an ammonium phosphate compound comprising a source of phosphate ions in solution.

3. (previously presented) The fertilizer of claim 1 in combination with ammonium phosphate wherein the amount of phosphorus from the ammonium phosphate is substantially equal to the amount of phosphorus from the ammonium phosphite.

4. (original) The fertilizer of claim 1 in a water solution of  $9.6 \pm 0.6$  weight percent nitrogen and  $34 \pm 2$  weight percent  $P_2O_5$ .

Claims 5-7 (canceled).

8. (currently amended) A nitrogen and phosphorus fertilizer composition comprising in combination a mixture of anhydrous ammonia, phosphorous acid and water adjusted to maintain pH in the range of about 5 to 8 where the composition includes nitrogen in the range of about 6 to about 10 weight percent and phosphorus in the range of between about 22 to about 36 weight percent and the nitrogen:phosphorous molar ratio is between 1:1 and 2.4:1.

9. (original) The composition of claim 8 adjusted to maintain pH in the range of about 5.5 to 6.5.

Claims 10-12 (canceled).

13. (previously presented) A method for fertilization of plant material comprising the step of applying a fertilizer compound as set forth in any of claims 1-4 and 8-9.

14. (currently amended) A method of manufacture of a fertilizer composition comprising the steps of:

mixing water, a source of nitrogen and phosphorous acid, and maintaining the temperature of the mixture at less than about 150°F and pH in the range of about 5 to 8 to provide a fertilizer having a concentration of ammonium phosphite as a source of phosphite ions, the ammonium phosphite having a nitrogen:phosphorous molar ratio of between about 1:1 to about 2:1,

wherein the fertilizer composition includes nitrogen in an amount between about 6 to about 10 weight percent and phosphorus in the form of  $P_2O_5$  in an amount of between about 22 to about 36 weight percent.

15. (currently amended) The process of claim 14 wherein the nitrogen source is selected from the group consisting of ammonia, anhydrous ammonia, ammonium nitrate and combinations thereof.

16. (original) The process of claim 14 wherein the pH is in the range of about 5.5 to 6.5.

Claims 17-20 (canceled).

21. (previously presented) The process of claim 14 wherein the nitrogen—phosphorus—potassium composition of the fertilizer is 9.8-34-0.

22. (previously presented) The process of claim 14 wherein the nitrogen—phosphorus—potassium composition of the fertilizer is 9.6-34-0.

23. (previously presented) The process of claim 14 wherein the nitrogen—phosphorus—potassium composition of the fertilizer is 6.4-34-0.

24. (previously presented) The process of claim 14 wherein the nitrogen—phosphorus—potassium composition of the fertilizer is 8.8-29-0.

25. (currently amended) A method of manufacture of a fertilizer composition having a nitrogen component and a phosphorus component in the form of phosphite ions comprising the steps of:

mixing water with an acid taken from the group consisting of polyphosphorous acid, phosphorous acid, analogs, derivatives and mixtures thereof and a nitrogen source at a temperature below about 150°F and at a pH of about 5-8 to provide a fertilizer having a concentration of phosphite ions,

wherein the fertilizer composition includes nitrogen in an amount between about 6 to about 10 weight percent and phosphorus in the form of  $P_2O_5$  in an amount of between about 22 to about 36 weight percent and the nitrogen:phosphorous molar ratio is between 1:1 and 2.4:1.

26. (currently amended) The method of claim 25 wherein ~~ammonia~~ is the nitrogen source is selected from the group consisting of ammonia, anhydrous ammonia, ammonium nitrate and combinations thereof.

27. (original) The method of claim 26 wherein the weight percent of nitrogen is about  $9.6 \pm 0.4$  and the weight percent of phosphite is about  $34 \pm 2.0$ .

28. (canceled)
29. (previously presented) A product made by the process of any of the claims 14-16 and 21-28.
30. (previously presented) A method of use of the product of claims 1-4 and 8-9 or 29 comprising the step of applying said product in liquid form to plants or soil as a fertilizer or fungicide, or both.
31. (previously presented) The fertilizer of claim 2 wherein the concentration of phosphite ions in the fertilizer is greater than the concentration of phosphate ions in the fertilizer.
32. (previously presented) The composition of claim 8 wherein the temperature of the composition is maintained below about 150°F.
33. (previously presented) The composition of claim 8 wherein the composition includes ammonium nitrate.
34. (currently amended) The composition of claim 8 wherein the phosphorus includes a phosphite component selected from the group consisting of ammonium phosphite, diammonium phosphite, ammonium polyphosphite and combinations thereof.
35. (canceled)
36. (previously presented) The composition of claim 34 wherein the composition includes a phosphate component.

37. (previously presented) The composition of claim 36 wherein the phosphate component is selected from the group consisting of ammonium phosphate, ammonium orthophosphate, ammonium polyphosphate and mixtures thereof.

38. (previously presented) The composition of claim 36 wherein the phosphate component is present in the fertilizer in an amount no more than the amount of phosphite component.

39. (previously presented) The composition of claim 36 wherein the phosphite component is present in the fertilizer in an amount substantially equal to the amount of phosphate component.

40. (canceled)

41. (previously presented) The method of claim 14 comprising mixing a phosphate component to provide a fertilizer composition having a combination of phosphite ions and phosphate ions.

42. (previously presented) The method of claim 41 wherein the amount of phosphite ions is greater than the amount of phosphate ions.

43. (previously presented) The method of claim 41 wherein the amount of phosphite ions is substantially equal to the amount of phosphate ions.

44. (new) The composition of claim 1 wherein the ammonium phosphite composition has a nitrogen:phosphorous molar ratio of between 1.4:1.

45. (new) The composition of claim 1 wherein the composition includes an ammonium polyphosphite composition.

46. (new) The composition of claim 34 wherein the ammonium phosphite component has a nitrogen:phosphorous molar ratio of between about 1:1 to about 2:1.

47. (new) The composition of claim 46 wherein the ammonium phosphite component has a nitrogen:phosphorous molar ratio of between about 1:1 to about 1.4:1.

48. (new) The method of claim 14 wherein the ammonium phosphite composition has a nitrogen:phosphorous molar ratio of 1.4:1.

49. (new) The method of claim 25 wherein the phosphite ions are selected from the group consisting of ammonium phosphite, diammonium phosphite, ammonium polyphosphite and combinations thereof.

50. (new) The method of claim 25 wherein the ammonium phosphite has a nitrogen:phosphorous molar ratio of 1.4:1.
